

The Feasibility of Global Software Development

Session mediator:

Elizabeth Hargreaves
University of Victoria

The Feasibility of GSD

- Short-term versus long-term feasibility of GSD.
- Appropriate use of GSD practices in relation to entire software engineering projects and during project phases.
- Intercultural, logistical, technical and fiscal limitations.

Panelists and papers in this session

David Boland

- transitioning from co-located to globally distributed environments within the framework of a specific case study.

Matthew Bass

- GSD strategies used by Siemens—one of the most globally distributed software companies in the world.

Casper Lassenius

- GSD challenges experienced during the maintenance phase of an e-commerce project.

Rafael Prikladnicki

- risk management issues related specifically to GSD projects.
